

COMMERCIAL SUNROOM PRODUCTS A Division Of Patio Enclosures, Inc.

McDonald's Corporation, Various Locations

McDonald's Corporation has been providing quality products to satisfied customers for many years. When their plans called for increasing patron seating capacity, they called on C.S.P., the experts in designing, manufacturing and installing commercial Solariums for restaurant use.

The custom designed, straight eave solarium not only provides additional seating capacity, but also volumes of natural light to create the ambiance to enhance the dining experience. A basewall was constructed to blend the new Solarium into the existing restaurant.

Our custom shading system complements the design capabilities of C.S.P. Construction time was less than 90 days. Comments received from franchise owners include "sales have increased", "customer satisfaction is up" and "C.S.P. is thorough and professional".

The building features are:

- Custom design
- Quality installation by certified employee-owners
- High performance, Low-E, Argon Gas Filled 1" insulated glass
- Solar cooled, bronze tint roof glass
- Quaker Bronze painted PPG Duracron/Polycron finish
- Custom Shading System
- Turnkey services

The Commercial Division of Patio Enclosures, Inc. will solve your space needs.
