

COMMERCIAL SUNROOM PRODUCTS

A Division Of Patio Enclosures, Inc.

The staff at the Temple sought a creative solution to enclose their massive walkway to protect the congregation from snow, wind and rain. C.S.P. was there to solve the problem.

A custom gable style enclosed walkway was designed and installed to span the 200 foot "L" shaped walkway. The walkway is suspended 45 feet from ground level by a steel and concrete substructure, which required many components of the walkway to be installed utilizing a crane. The walls are made of all glass units combined with our patented insulated roof system.

An added feature was to install a dome at the walkway intersection. The dome section has full length glass units which overlook the wooded area surrounding the Temple. A full size glass enclosure connects the walkway to the Temple entrance doors. The glass enclosure affords people a place to congregate after the service.

The building features are:

- Custom design and engineering
- Installation by factory trained and certified employee owners.
- Bronze/Beige Aluminum, PPG Duracron/ Polycron finish
- Structural aluminum roof trusses
- Patented glass roof panels

The Commercial Division of Patio Enclosures, Inc. will solve your space needs.
