A Division Of Patio Enclosures, Inc.

## TRUST YOUR NEXT PROJECT TO THE TEAM OF C.S.P.

Being a major University in the Northeast, there is a constant demand for additional, cost-effective space. As a result of increased enrollment, the dining area at Tufts required additional seating capacity. Not desiring to simply use conventional construction, the University called upon the experts at **C.S.P.** to provide a custom, straight eave solarium. The volume of natural light provided by the solarium is a big hit, both to students and administration. Everyone wants to eat their meal in the solarium, even on those blustery winter Massachusetts days.

The custom designed, straight-eave solarium blends beautifully with the architectural style of the existing building. Providing turnkey services, **C.S.P.** was able to minimize the use of multiple contracts for the University. We look forward to working with you on your next project.

### The building features are:

- Custom design
- Installation by employee owners
- 1" insulated bronze, Low-E tempered glass
- Laminated roof glass
- Duracron/Polycron white finish
- Commercial doors with panic hardware

The Commercial Division of Patio Enclosures, Inc. will solve your space needs.
